

Supply Chain Academy CP Training Services

Supply Chain Leadership Professional Degree Apprenticeship

This work-based programme is designed to provide the essential knowledge, understanding, skills and experience required to operate effectively and successfully in a senior supply chain role. Core areas focus on: supply chain operations; supply, demand and forecasting; network design; legislation; organisational strategy and finance.

Duration and Delivery

It will typically take 3½ years to complete the Degree Apprenticeship. However, there may also be opportunities to join part way through the programme if candidates have considerable experience in a particular area. Apprentices will benefit from lectures and seminars, delivered at locations in Leeds and London. Learning is supported by a variety of online tasks and independent research activities which can be undertaken in the workplace.

The specially designed apprenticeship is delivered in partnership with Leeds Trinity University.

- This Apprenticeship has been designed by industry professionals and is suitable both for new recruits and for those already employed in the industry.
- Small groups and specially-designed learning sessions will ensure that apprentices get the most out of their time in workshops and lectures.
- Typically, 20% of the apprenticeship will be 'off the job' - this includes work-based projects and job-related activities.
- The programme can be funded by employers through the apprenticeship levy.
- Successful apprentices will gain a BSc (Hons) Professional Practice in Supply Chain Leadership.

The cost of the apprenticeship, which includes training days, can be offset against the apprenticeship levy.

Learning, Teaching and Assessment

Each apprentice will create a learning plan that will allow them to develop their own unique pathway to their personal and professional goals.

Throughout the programme, apprentices are assessed through:

- > Reports
- > Presentations
- > Professional discussions
- > Assignments
- > Work-based projects

Apprentices will be expected to create a portfolio of evidence throughout the programme, to demonstrate how they have achieved the knowledge, skills and behaviours set out in the Apprenticeship standard. Evidence may include reports, reflective logs and formative assessments.

Upon completion of the degree, each apprentice will use their portfolio to progress to the final part of the Apprenticeship - the 'end-point assessment'.

This is based on a substantial work-based project which is agreed by both the employer and the University in the final six months of the Apprenticeship, a presentation and an oral exam (viva).

YEAR 1

Learning Review

Planning Personal Professional Development

Negotiated Learning:

Principles of Supply Chain Management
First principles
