

The Supply Chain
Diploma

Dive in Deep

Our programme provides an immersive learning experience, where aspiring supply chain managers and specialists will explore every function of the supply chain.

Over 2 years, learners will follow the journey of raw materials, from manufacturing and production through to warehousing and distribution.

During this time, they'll develop knowledge and skills in areas such as risk management, procurement, forecasting, logistics planning, and relationship management.

Learners will benefit from an excellent support structure and a vast range of workplace activities that get them jumping right into the supply chain.

Contact Us

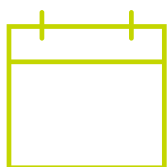

Features

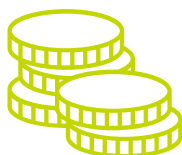

Our programme provides comprehensive understanding of the entire supply chain and the importance and impact of each function.

Seasoned professionals help learners develop the essential knowledge, skills and behaviours required to excel in supply manager or specialist roles.

Learners will apply their learning practically, through a wide range of impactful workplace activities before defining and implementing an individual business improvement project.
